EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard Park on February 9, 2005.

The application has been amended as follows:

Claims 1-21 have been cancelled from the application.

REASONS FOR ALLOWANCE

2. Claims 22-45 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter; The prior art, U.S. Patent No. 6,275,829 to Angiulo teaches a thumbnail image produced in place of an original image and a pointing device employed to select the thumbnail image in the Web page to activate the link and replace the image. Angiulo provides a means for replacing thumbnail images; however, the reference fails teach or suggest replacing a full bitmap image with a line drawing version that is substantially the same size as the graphical image, and including the outlines of shapes that are present in the full bitmap version. Moreover, the reference lacks the specific language directed towards linking the full bitmap version of the graphical image into the graphical presentation so that selecting the line drawing version of the graphical image causes the full bitmap version of the graphical image to be displayed. The

reference, U.S. Patent No. 5,809,179 to Marimont, discloses the method of taking an original image data structure in raster, or pixel form and automatically produces an accurate rendered image versions of the original image from a data structure representation of the original image called an image structure map. More specifically, the reference teaches the creation of a line drawing through automatic image segmentation; however, the reference fails to teach inserting the line drawing version of the graphical image into a page in the graphical presentation and linking the full bitmap version of the graphical image into the graphical presentation so that selecting the line drawing version of the graphical image causes the full bitmap version of the graphical image to be displayed.
